

PRESS RELEASE

BÄRO expands XR luminaire series: A full range with a compact design

With professional performance and compact dimensions, the XR luminaire series has already convinced numerous planners and users of retail lighting. Now BÄRO is further expanding the series: Ontero XR surface-mounted luminaires now come with flush-mounted in-track adapters, while Intara XR recessed luminaires complete the system for even more versatile and differentiated lighting concepts.

The design element connecting the XR series is the compact die-cast aluminium luminaire head, which combines high-quality design with optimum LED heat management. The latest additions to this series mean that Ontero XR surface-mounted luminaires for track mounting are now also available with an in-track adapter. In addition to the Pendi XR suspended luminaire and the Intara XR semi-recessed luminaire, there is now also the new Intara XR recessed luminaire, which is ideal for an uncluttered and low-key ceiling look.

Intara XR recessed luminaires: Firmly connected, quickly wired

With decades of experience as a lighting partner to retailers, a priority for BÄRO was that the new recessed luminaires should be easy to mount. Ready-to-install, permanently connected luminaire-driver combinations enable quick and simple installation. The electrical connection and the through-wiring is realised with a primary-side GST connector. The cut-out is 132 mm – the same as the semi-recessed and suspended luminaires of the XR series and the recessed luminaires of the CX series. This shows the importance of the system concept in the entire BÄRO range and ensures additional security and flexibility in the whole planning process.

Ontero XR surface mounted luminaires with in-track adapter

Not only does the lighting head with a diameter of just 90 mm offer high light quality and extremely compact dimensions; BÄRO has also succeeded in taking miniaturisation one step further with its driver electronics. The new Ontero XR are equipped with flush-mounted in-track adapters that make these versions of the track-mounted spotlight appear even more compact. Both the Intara XR and Ontero XR recessed luminaires with in-track adapters feature the proven BÄRO LED reflector technology. The price/performance ratio also makes the compact power packs in the XR series ideal for cost-efficient applications ranging from the classic food sector to near food products, shops and boutiques in the textile and non-food sectors.

About BÄRO

BÄRO is a leading specialist in the fields of retail lighting and clean air technologies with global operations. The family-owned business based in Leichlingen is managed by the married couple Dr Sandra von Möller and J. Manuel von Möller. With the slogan "Fresh Light for Fresh Products" BÄRO offers professional lighting solutions for all formats in the retail world. Furthermore, in 1996 BÄRO launched its Clean Air Technologies division and offers integrated solutions for the restaurant and catering industry, canteens and the food industry. The careful use of energy and social responsibility are important to BÄRO here. As a signatory of the "Diversity Charter" the company is committed to diversity and cultivates a culture of respect for every individual. In addition BÄRO supports the charity KIDsmiling that was founded in 2003 as a private initiative by Dr Sandra von Möller to help socially disadvantaged children.
